ENV is a member of Greencap Group.....

Greencap Limited is the ASX listed parent company for the following highly respected risk management companies:

- Noel Arnold & Associates Pty Ltd
- Trimevac Pty Ltd
- ENV Australia Pty Ltd
- Validus Group Pty Ltd
- ECC Pty Ltd
- Environmental & Licensing Professionals Pty Ltd
- AEC Environmental Pty Ltd
- Trevor R Howse & Associates Pty Ltd; and
- Leeder Consulting Pty Ltd
- MC² Pacific Pty Ltd

One of Western Australia's largest environmental practices, successfully supporting the environmental needs of our clients in the land development, mining, infrastructure, industrial and Government sectors

Helping clients reach their goals...

ENV Australia Pty Ltd assists clients to achieve their project and environmental goals and manage risk through the delivery of technical, strategic and procedural environmental services.

Servicing clients in the sectors of:

Land Development

ENV's environmental planning and project management expertise is supported by the technical capability required to satisfy all aspects of environmental assessment and approvals for land development projects. ENV operates across the spectrum of the land development industry from strategic planning to clearance of subdivision conditions for both greenfield and brown-field projects.

Mining and Extractive Industries

ENV services many of the State's premier mining proponents. ENV assists clients in pre-feasibility, feasibility and mining approvals. ENV is typically engaged during the pre-feasibility stage of a proposed development to undertake large-scale baseline flora and fauna surveys, or to provide guidance on anticipated issues and approvals timelines. ENV also monitors, mitigates and manages environmental issues such as, dust, contamination, acid sulphate soils and natural areas. ENV also provides post mining remediation and rehabilitation services.

Infrastructure

The scale of many infrastructure projects requires substantial biological and environmental assessment surveys. ENV's size and structure enables the completion of such large surveys, particularly for linear corridors and alternative energy sources. ENV assist clients identify and meet the myriad approval requirements such as Bed and Banks, Clearing Permits and Works Approvals.

Industry

ENV acts for industrial clients to fulfill the environmental reporting requirements of the Environment Protection Act and associated Regulations. ENV can monitor and manages air, noise and water discharges and releases. ENV also has experienced professionals who can assist clients with greenhouse and water efficiency / recycling initiatives. ENV also assists clients in the selection of suitable sites for industrial projects.

Government

ENV has personnel with experience in Commonwealth, State and Local Government from a range of backgrounds including Environmental Health, Biology, Policy, Program Delivery and Environmental Approvals. ENV regularly works with government agencies in the areas of strategic planning, site assessment and approval documentation, policy development, natural area management, procedure development, research and project development.

Services provided

Contamination & Earth Chemistry

- Due diligence
- Risk assessments
- Site assessments
- Remediation
- Auditing under the CS Act
- Hazardous materials assessments
- Acid sulphate soils
- Acid mine drainage
- Mine site liabilities

Water

- Integrated urban water management plans
- Drainage and stormwater management
- Water recycling strategies
- Water conservation strategies
- Surface water and groundwater monitoring
- Ecological water requirements
- Nutrient pathway assessment
- Groundwater modelling
- Remediation and management strategies

Environmental Approvals

- EPBC Act and EP Act referrals, assessment and approvals
- Strategic assessments
- Works approvals
- Mining proposals
- Permits and licensing
- Compliance auditing and reporting
- Client liaison and regulatory liaison

Energy

- Environmental performance of buildings in preparation for GBCA Greenstar and NABERS assessment
- Energy auditing, efficiency and conservation plans
- UDIA Enviro development planning and assessments for the urban land development and housing industries
- Carbon emissions management plans for residential, commercial and industrial sectors
- Energy efficient resource recovery solutions for the waste management industry
- Beneficial wastewater reuse strategies with nutrient and carbon cycling

Asbestos Management

- Asbestos investigations and identification
- Clearance inspections;
- Certifications related to the removal of asbestos and other hazardous materials; and
- Air monitoring during removal.

Fauna & Flora

- Level 1 Declared Rare and Priority flora and fauna surveys
- Level 2 flora, vegetation and fauna surveys
- Vegetation health, condition and mapping assessments
- Vegetation Clearing Permit surveying and reporting
- Rare fauna monitoring and management
- Coordinator of terrestrial and subterranean fauna surveys
- Vegetation rehabilitation and monitoring

Air Quality

- Solutions for the real time management of air quality at land development and land remediation projects consistent with DEC guidelines;
- The development and implementation of air quality management: strategies for the real time management of materials handling and processes for industrial complexes; and
- Assistance in the preparation of works approvals and licence applications where emissions to air are an issue.

Environmental Planning

- Strategic planning assessments and reporting
- Scheme amendment support documentation
- Subdivision condition clearance
- Wetland assessment, reclassifications and management: plans
- Foreshore determination and management plans
- Strategic project timeline advice
- Coordinated delivery of technical advice
- Due diligence reports
- Expert witness
- Environmental Management Systems (ISO 14001)

Environmental Health

- Health risk assessment and development of options for alternative water supply schemes
- Effluent management
- Mosquito management plans
- Assessment of on-site wastewater systems, land planning and associated development issues
- Department of Health Approvals, including on site wastewater systems, alternative water supply schemes, drinking water supply schemes, and high risk public premises including temporary public events (public buildings)
- Noise assessments, including review of acoustic consultants reports
- Assessment of risks associated with food handling and food premises
